

# Data Sheet

## 2e2 PCI DSS Scoping Services

2e2 offer a PCI DSS QSA led assessment to help you determine whether you can benefit from a reduction in scope of your PCI DSS environment by deploying a P2PE (Point to Point Encryption) solution to support mobile payments.

If you don't intend to use mobile payment mechanisms in the near future then this review can also help be used to provide guidance on any other PCI DSS issues you may have.

This review is offered at a fixed price of £1,500 representing up to 30% saving on our standard rates.

### Customer Challenges

Payment technology is constantly evolving and one technology that is helping improve customer experience is the introduction of mobile payments through tablet and smartphone based devices.

And it's not just retailers that benefit from the use of mobile payment systems but hospitality and transportation industries along with contact and call centres where card details are taken over the phone.

However this new technology brings its own challenges to ensure that payment card information continues to be handled securely and that merchants are still able to comply with the Payment Card Industry Data Security Standard (PCI DSS).

### The Assessment

The 2e2 Scoping Assessment Service will help you understand how best you can deploy a mobile payment solution taking into account potential scope reduction of your current PCI DSS environment and the current payment channels that you use.

The Scoping Assessment Service from 2e2 will provide you with the information you need to be able to make an informed decision on how you can implement and secure mobile payment solutions whilst maintaining and potentially reducing the scope of your PCI DSS assessments.

## Why 2e2?

2e2 focuses on customer-centric transformational programmes relating to Employees, Customers, Citizens and the Enterprise. 2e2 has a strong track record in successfully applying technology and communication-based services to address a range of key objectives that result in reduced infrastructure costs, improved service and enhanced performance, creating business advantage for our customers.

2e2 has developed a new and unique approach in the provision of solutions to its customers. By combining far-reaching technical expertise with deep level business knowledge, and focusing this onto particular business areas, 2e2 is able to address the needs of its customers, seamlessly aligning IT to business priorities.

## Assessment Objectives

- Determine whether a P2PE solution for mobile payments is right for your organisation.
- Identify where a P2PE solution can reduce the scope for your current PCI DSS environment.
- Provide guidance on any other PCI DSS related issue you may have.

## Deliverables

The assessment will consist of an on-site visit by a 2e2 PCI DSS QSA. This will allow an appreciation of the current card holder processes and data flows to be understood and for the current card holder environment to be assessed for eligibility for deployment of a P2PE solution for mobile payments.

If you don't intend to deploy mobile payment solutions the review can be used to gather information on any existing PCI DSS issue you may have questions about.

The findings will then be documented to help the customer understand how the use of a P2PE solution can be implemented in their organisation and how this may reduce their current PCI DSS environment scope for future assessments.

Or where a customer has a specific PCI DSS issue the document will provide recommendations and guidance to assist with a way forward.
